Education

The Chinese University of Hong Kong, Shenzhen	2024 – 2029 (Expected)
Ph.D. in Data Science (M.Phil. entry, 2024; Ph.D. transfer, Spring 2026)	GPA: 3.63/4.0
Supervised by Prof. Tianshu Yu	

The Chinese University of Hong Kong, Shenzhen	May 2024
Bachelor of Science in Applied Psychology	

Research

First-author projects unless otherwise noted.

Paper: EVA-MILP: Towards Standardized Evaluation of MILP Instance Generation

- As the primary contributor, conceptualized and implemented EVA-MILP, a comprehensive framework to standardize the evaluation of MILP instance generation methods.
- Pioneered a novel evaluation methodology that moves beyond superficial structural metrics to analyze deep computational behavior through solver-internal features.

Paper: GRIMIP: A General Framework for Instance-Specific Configuration of MIP Solvers Using Large Language Models

- Developing a framework that uses a Large Language Model to enhance Bayesian Optimization, enabling highly efficient, instance-specific parameter tuning for the Gurobi solver.

Topic: Kernel Agent for Cross-Platform Kernel Optimization and Deployment

- Building a kernel agent for rapid kernel deployment and optimization across NVIDIA GPUs and Ascend NPUs, supporting cross-language workflows with Triton and TileLang-Ascend.
- Designed an MAB-based memory management mechanism for fast kernel deployment and applied Bayesian Optimization to optimize memory scheduling and kernel-level performance.

Research Interests

Combinatorial Optimization; Bayesian Optimization and Bandit Methods for Black-box Optimization and Scientific Discovery; Optimization for Large-scale Foundation Model Training and Agentic Systems.

Teaching Experience

Teaching Assistant	MAT3007 Optimization	Fall 2025, Spring 2026
--------------------	----------------------	------------------------

Service

Gold Reviewer	ICML 2026
Reviewer	NeurIPS 2026

Skills

Coding tools:	Proficient with Codex, Claude Code
Solvers:	Proficient with Gurobi, SCIP

Relevant courses:	Optimization Theory and Algorithms, Machine Learning, Measure Theoretic Probability, Advanced Convex Optimization, Dynamic Programming, Multi-Armed Bandit.
